In the pursuit to further bridge art and technology through means of code, I love the entire journey. The curiosity to learn, the connection of improving together through teaching, and the excitement of problem-solving real-world problems.

Skills

— Skilled in Teamwork, leadership, winning together and creative thinking.

— I feel at home with problem solving and data structures.

— Means of solutions via Typescript/Javascript, NodeJS, React/Redux, AWS, GraphQL, Python, SQL, React Native and any other tool fit for the problem at hand.

Experiences

Revel: 'Senior Software Engineer';   // Nov 19' – Present

— Lead Frontend and API gateway development.
  - Comfortable with planning and executing medium to large ambiguous projects. "SCRUM" inspired workflow, working closely with a team of Designers, Engineers and Stakeholders, I'm familiar with bringing a project from idea to competition.
  - Brought 7 greenfield projects from Idea to full development life cycle and additionally several general tools such as a GeoFence management tool, Moped Safety onboarding flow and more.
  - Apps: **Customer experience / Dispatcher / Field Operations / Consumer Mobile web / Driver Scheduling and management / (ride-hail) Passenger experience / Driver ride-hail app.**

— Maintained and improved codebases consistently.
  - Lead open discussion arch. meetings to incrementally improve our Frontend codebases as well as our API gateway (Apollo / GraphQL) such as:
    - Migrating FE to a Mono-repo. This includes creating custom Component library, Style library, CICD Tooling, etc....
    - Integrating Code-generation into FE and API codebases.

— Cross-Team communicator. whether it's with marketing to help release a new experience in our consumer app, discussions with the data team on integrating analytics and pipeline into snowflake or meeting with the design team and stakeholders to flush out the final product and handoff.

— Ownership; Became a source of knowledge in domains I built with (Applications shared above). Between Pair-Progamming with other engineers, mentoring junior-mid engineers on our team or general knowledge sharing.

Group Nine Media: 'Software Engineer';   // Sept 17' – Nov 19'

— Helped, lead and developed through four full software development life cycles projects and maintained/improved current infrastructure. Ranges of development from supporting large data via AWS/Firestore pipeline for internal tooling to daily high traffic consumer0facing products.

— Agile and SCRUM workflows, with direct architectural communication and dev design implementation with our VP of Engineering.

— Lead the drive to implement React and Redux into our stack and bridge that gap for other devs via pair programming, talks, and documentation, previously on CakePHP.

Complex Media: 'Front-End Developer';   // Oct 16' – Sept 17'

— Collaborate with design, R&D, product and team developers to produce compelling, user-friendly components on six of our highly trafficked sites.

— Review and followed tasks/issues via SCRUM Agile environment.

— Developed new components with scalability in mind built on top of a React/Redux eco system.

— Debug and improved our custom server-side rendering framework.

321GoProject: 'Web Developer';   // July 15' – Oct 16'

- Support and maintained 250+ frequently updated websites.
- Owned projects from the beginning to end, by being clients first chain of communication, to handing off their new developed site & how to use it.
- Maintain custom Wordpress themes and plugins.

Freelance: 'Web Developer';   // Oct 13' – Present

- Create elegant, mobile-friendly websites for corporations, non-profits, and artists.
- Clients: Tavros Capital, GreenTop Farms, Hooptee, Achievements Unlimited LLC, Yocca Design, Fairmount&Co.

Education

Temple University

Credited classes in Data structures, Low Level Programming (C), Calculus, C++, Program Design & Abstraction and Java

Hobbies

Photography

Hiking & Camping

Learning new things (Currently French and Piano)

Travel
